

ENTRUSTED is a research project on the development of secure satellite communications for public administrations of European Union member states and European agencies. The project is implemented under Horizon 2020 program by a consortium of nearly 20 institutions and agencies from the European Union, including the Polish Space Agency. The ENTRUSTED project will contribute to the formulation of assumptions and guidelines for the future EU GOVSATCOM program, in particular by identifying end-user needs and requirements for secure satellite communications.
